

Figma Extra Credit

Mo Abdelmajid, Oday Suleiman, lancarlo Trejo, Bryan Dominguez

A brief description of your project idea and goals: Our project is a UIC wiki page, it was made to be able to share and create posts relevant to UIC students. This could be about certain majors, classes, events or even just general information. The goal was to make a nice hub for UIC students, so they do not have to bounce around multiple apps or different websites to find the information they are looking for, with the wiki page, all of their answers are on one site.

Explaining why certain layouts, flows, or patterns were chosen and how it helps the users: We wanted the app to be as user friendly as possible, which is why certain decisions were made. For example, we have a recent topics section, where a user's most recent searches are available to save them the headache of having to go through it again. Another example of this is the guest section, by having one it gives the user freedom to have a quick search if they are in a rush with some limitations to what they could do.

Any assumptions, limitations, or open questions your team still needs to resolve for the frontend: The biggest assumption for this wiki page is that the student needs to have a UIC email to have full access, and guests only have the access to view posts and not make or comment on any. Another is how we are going to fill the empty spaces on some of our screens, with our current construction, we have some dead space because it is supposed to be a complete app with all of the UIC students using it, there is not any true "posts" from anyone yet, so we need to figure out a way to simulate it in a way that gets the point.

Any future improvements or open questions your team is considering for the frontend: Future improvements could include things such as global searching, where you do not have to go through a certain topic, as well as editing posts. Other small things such as filtering by someones email, date or even tag could be added in the future versions of our wiki page. Also, the way the posts works can always be changed, for example we are always looking for ways to improve the posts, making them more flexible.
